

Take a Break

If time allows, step away from studying for a while. You have done a lot, and your brain needs time to recover.

Table of Friends Activity

- Complete the Table of Friends: for every quantity listed, fill in its symbol, unit, and relevant equation(s). Try to do this without your notes, but do have the AP[®] Physics 1 Equation Sheet available, since you will have access to it on the real exam. A link to the Equation Sheet is provided below the video.
- The Table of Friends also includes links to videos and resources for each topic if you need to review further.

Review Your Weak Units

Use the “Show Previous Attempts” feature in the Multiple-Choice practice exam to identify which units need more review. Resources available to help include videos and content on the Flipping Physics website, the Ultimate Review Packet, and the free-response solutions here in the Ultimate Exam Slayer.

A Note on Doing the Work

Reading through solutions without first attempting the problems yourself does not prepare you for the exam. You learn physics by doing physics. Go back and attempt every question on your own before comparing your work to the solutions.
